PROFESSIONAL SUMMARY

Junior Backend / Full-Stack Developer with 3+ years of IT systems and application support experience, now focused on software engineering, application development, and database-driven web applications. Hands-on project experience across Next.js, Node.js, Express, Prisma, PostgreSQL, REST APIs, authentication, Docker, Jenkins CI/CD, SonarQube, Trivy, OWASP Dependency-Check, Python, C#, Java, and SQL. Brings production support discipline in debugging, root-cause analysis, troubleshooting, testing support, workflow automation, and service continuity in enterprise environments.

TECHNICAL SKILLS

Languages	JavaScript/TypeScript, Python, C#, Java, SQL, HTML5, CSS
Full-Stack	Node.js, Express.js, Next.js, REST APIs, CRUD, MVC architecture, web applications, application development
Databases	PostgreSQL, SQL Server, MySQL, Prisma ORM, database-backed workflows, data design
Design	Software design, systems design, technical design, UML diagrams, design patterns, object-oriented programming
Testing & QA	Unit testing, API testing, integration testing, system testing, functional testing, regression testing, UAT, debugging
DevOps & Security	Git, GitHub, Docker, Jenkins CI/CD, GitHub Actions, SonarQube, Trivy, OWASP ZAP, Nikto, OWASP Dependency-Check
Analytics	Business data analytics, data aggregation, budget analytics, decision-support features, analytical problem solving

SELECTED PROJECTS

FinTrack - SaaS-style Personal Finance Tracking System (Next.js, Node.js, Prisma ORM, PostgreSQL, GitHub Actions, Vercel)

- Built a deployed full-stack personal finance application featuring authentication, protected APIs, transaction/category/budget CRUD, reports, dashboard KPIs, and budget-vs-actual analytics.
- Implemented an analytics layer with PostgreSQL-backed data aggregation, Prisma workflows, budget monitoring, cashflow insights, and threshold-based spending classification.
- Added GitHub Actions and Vercel CI/CD deployment to support automated checks and consistent release delivery.

DevSecOps CI/CD Pipeline (Jenkins, Docker, SonarQube, Trivy, OWASP ZAP, Nikto)

- Built CI/CD workflows using Jenkins and Docker, integrating static code analysis, vulnerability scanning, and pipeline-based validation.
- Applied OWASP ZAP, Nikto, Trivy, and OWASP Dependency-Check to identify web, container, and dependency security risks before deployment.
- Practised containerisation and deployment fundamentals, including exposure to Kubernetes deployment concepts.

Car Rental System (C# / .NET 8)

- Developed a console-based rental management application using C# and .NET 8.
- Applied object-oriented design to model customers, vehicles, rental transactions, and business rules.

Render-ready CRUD Server (Node.js, Express)

- Developed RESTful APIs with structured request handling, validation, CRUD operations, API testing, and deployment-ready backend architecture.

EduConnect Backend (Academic Project)

- Designed REST APIs and PostgreSQL-backed services using MVC architecture, maintainable code structure, validation, and integration-ready workflows.

PROFESSIONAL EXPERIENCE

U3 Infotech Pte Ltd - System Engineer (Application & Software Support) | Mar 2024 - Jun 2025

- Resolved enterprise application and system issues using root-cause analysis, debugging, and structured troubleshooting to restore service continuity.
- Configured, tested, and deployed application updates in support of operational workflows, UAT support, and production support requirements.
- Automated recurring operational tasks using scripts and system utilities to improve support efficiency and reduce manual effort.

JK Tech Pte Ltd - IT Engineer (Systems & Applications) | Jul 2022 - Jun 2023

- Facilitated web-based and desktop application workflows by troubleshooting application issues, user workflows, system testing, and data-related incidents.
- Automated routine support workflows using scripts and assisted with operational improvements across systems and applications.

Micro 2000 Services / Technologies Pte Ltd - Technical Support Engineer | Apr 2022 - Jun 2022

- Installed, tested, and updated software applications while assisting with data migration and system provisioning activities.

EDUCATION & CERTIFICATIONS

- Ngee Ann Polytechnic - Diploma in Full-Stack Development
- Singapore Polytechnic - Computer Engineering, Job Specialisation Certificate
- BCG RISE - Business & Data Analytics (Distinction): business data analytics, business needs analysis, data-driven problem solving
- Additional modules: Analytics, Cyber Security, AI & Blockchain; Agile & Software Development
